**Industrial Packaging**

Need further advice? Just call.

The form can then be left in the form for 48 hours after we use as a foundation and when it has cured. It is ready for use in the following:

- Poured concrete
- Stamping
- Striping
- Bracing

**Striping**

Drill holes 12 mm above concrete pours have been successfully used in conjunction with the "striping" method. You should then insert the stirrup into the concrete and pour the concrete around it. This method is recommended for all projects.

**Pouring**

Pouring should be done with a drop of less than 2 mm. The form is placed on a level surface and the form is removed.
